

Definition 5.5.1. A *partition* of a closed interval $[a, b]$ is a finite subset P of $[a, b]$ which includes a and b . We will usually number the elements of P in an increasing manner so that $P = \{x_0, x_1, \dots, x_n\}$ where

$$U(f, P) = \sum_{i=1}^n \sup\{f(x) : x \in [x_{i-1}, x_i]\}(x_i - x_{i-1}).$$

$$L(f, P) = \sum_{i=1}^n \inf\{f(x) : x \in [x_{i-1}, x_i]\}(x_i - x_{i-1}).$$

$$L(f, P) = \sum_{i=1}^n m_i \Delta x_i \text{ and } U(f, P) = \sum_{i=1}^n M_i \Delta x_i.$$
